

KWS CRISPIN

Winter Wheat

Conqueror x CPBT W134

SEEDING
THE FUTURE
SINCE 1856

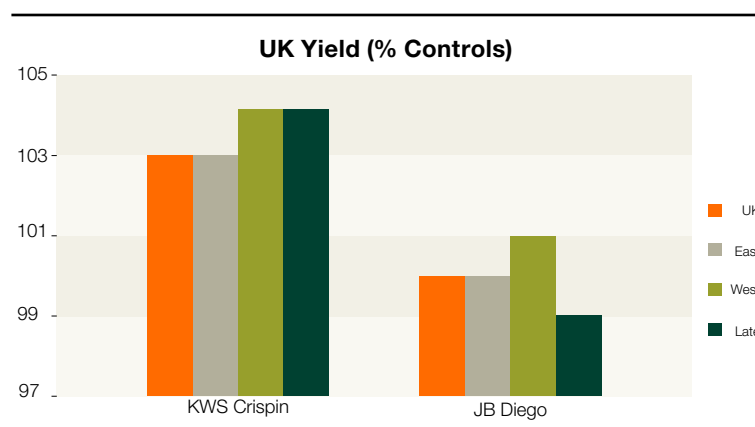

Late sown, easy to grow!

- A clean variety with good physical grain quality
- Vigorous growth; quick to reach stage 31 when November sown
- Medium height and maturity
- Conqueror type; excellent choice in the late sown slot (104)

KWS Crispin is a high yielding Group 4 with good physical grain quality and exceptional disease resistance characteristics. Resistance scores include maximum ratings for mildew and yellow rust and a strong *Septoria* score, plus the added benefit of OWBM resistance. Its disease resistance is highlighted by its untreated yield.

As a very vigorous variety, and with Conqueror in its parentage, it comes as no surprise that KWS Crispin performs well in the late sown slot. Its exceptional package could prove to be a valuable tool in the fight against blackgrass.
